Problem Overview & Example Context

Maze Problem Example

C++ Solution (BFS Approach)

```
class Solution {
public:
    int nearestExit(vector<vector<char>>& maze, vector<int>& entrance) {
        int n = maze.size();
        int m = maze[0].size();

        vector<pair<int,int>> dir = {{1,0}, {0,1}, {-1,0}, {0,-1}};
        queue<pair<int,int>> q;

        int sr = entrance[0];
        int sc = entrance[1];

        maze[sr][sc] = '+';
        q.push({sr, sc});
        int ans = 0;

        while(!q.empty()) {
            int currsz = q.size();
            while(currsz--) {
                int r = q.front().first;
                int c = q.front().second;

                if(r == 0 || r == n-1 || c == 0 || c == m-1) {
                    if(!(r == sr && c == sc)) {
                        return ans;
                    }
                }
            }
        }
    }
};
```

```

        }
    }

    q.pop();

    for(auto it : dir) {
        int nr = r + it.first;
        int nc = c + it.second;

        if(nr >= 0 && nc >= 0 && nr < n && nc < m) {
            if(maze[nr][nc] == '.') {
                maze[nr][nc] = '+';
                q.push({nr, nc});
            }
        }
    }

    ans++;
}

return -1;
}

};

```
