

Number of Good Pairs (LeetCode 1512)

Authored by: Arpit Raj, LNMIIT Jaipur | Date: August 22, 2026

Interview Questions

Asked in: Bloomberg, Google

Key Observations & Concept

- basic obsservation based
- 1 1 1 1 he → to 3+2+1=6
- iska general formula he ki 1 to (n-1) ka sum
- 1 to n ka sum is $n*(n+1)/2$
- 1 to n-1 ka sum is $n*(n-1)/2$
- to bas hashmap me frequency ka sawal he

C++ Implementation

```
class Solution {
public:
    int numIdenticalPairs(vector<int>& nums) {
        //basic obsservation based
        //1 1 1 1 he
        //to 3+2+1=6
        //iska general formula he ki 1 to (n-1) ka sum
        //1 to n ka sum is n*(n+1)/2
        //1 to n-1 ka sum is n*(n-1)/2

        //to bas hashmap me frequency ka sawal he

        int n=nums.size();
        unordered_map<int,int> freq;

        for(int num:nums){
```

```
        freq[num]++;  
    }  
  
    int ans=0;  
    for(auto &it:freq){  
        int f=it.second;  
        ans+=f*(f-1)/2;  
    }  
  
    return ans;  
}  
};
```
