Explanation Notes

Observation & Strategy

- boht simple question he
- dhyan se dekho
- Example Array: `2, 10, 7, 5, 4, 1, 8, 6`
- pehle minelement and maxelement ki madad se find position of 10 and position of 1

The Three Cases

- **Case 1:** dono ko left se nikaalo
- **Case 2:** dono ko right se nikalo
- **Case 3:** ek ko left ek ko right sse

Source Code

```

class Solution {
public:
    int minimumDeletions(vector<int>& nums) {
        //boht simple question he
        //dhyan se dekho

        //2,10,7,5,4,1,8,6
        //pehle minelement and maxelement ki madad se
        //find position of 10 and position of 1

        //case 1 dono ko left se nikaalo
        //case 2 dono ko right se nikalo
        //case 3 ek ko left ek ko right sse

        int n=nums.size();
        int minpos=min_element(nums.begin(),nums.end())-nums.begin();
        int maxpos=max_element(nums.begin(),nums.end())-nums.begin();

        int l=min(minpos,maxpos);
        int r=max(minpos,maxpos);

        //case 1 , both from left , r tak remove krna padega
        int c1=r+1;

        //case 2 , both from right , l tak remove krna padega
        int c2=n-l;

        //case 3 , one left , one right
        int c3=(l+1)+(n-r);

        return min({c1,c2,c3});
    }
};

```
