

LeetCode Solution: Split Num

Authored by: Arpit Raj, LNMIIT Jaipur

Date: September 20, 2026

Observation & Approach

boht hi observation based solution he iska

Example 1

- let 4325
- sort 2345
- ab bas alternate order me lelo
- num1 = 24
- num2 = 35

Example 2

- let 678
- sort 678
- ab bas alternate order me lelo
- num1 = 68
- num2 = 7

Algorithm Steps

s1 -> sort

s2 -> take alternate digits

C++ Code Implementation

```
class Solution { public: int splitNum(int num) { //boht hi  
observation based solution he iska //let 4325 //sort 2345 //ab bas  
alternate order me lelo //num1 = 24 //num2=35 //let 678 //68 and 7 //s1-  
>sort //s2->take alternate digits vector<int> arr; while(num > 0) { int  
dig = num % 10; arr.push_back(dig); num = num / 10; } sort(arr.begin(),  
arr.end()); int n = arr.size(); int num1 = 0; int num2 = 0; for(int i =  
0; i < n; i += 2) { num1 = num1 + arr[i]; num1 = num1 * 10; } for(int i =  
1; i < n; i += 2) { num2 = num2 + arr[i]; num2 = num2 * 10; } num1 = num1  
/ 10; num2 = num2 / 10; return num1 + num2; } };
```
